

Estratec

Outsourcing Services

Cost-effective

Outsourcing makes sense for cutting costs while reducing workload on the employee. Outsourced labor may cost 90% less than the same labor performed in-house in Western Europe or North America.

Work that's been outsourced usually ends up in third-world countries with a **highly educated** population. These outsourced employees **cost less** than their first-world counterparts, making them an interesting option to look into.

Time-saving

It takes around 43 days to find a new developer (often they have a 3 months period before leaving a company).

When you outsource, you don't have to spend time recruiting, hiring, training, and housing employees for short-term projects.

Scale your team

Today software development outsourcing is a kind of external SaaS tool to grow a technology behind your business.

It's like using one of Amazon's Web Services to scale the capacity – just drag-and-drop a trigger to scale your external team and their skills you need at the moment.

Quality first

The quality and innovation of our products are the result of a mixture of our **passion for technology**, the adoption of well-known software development processes and commitment to our projects.

Over the years our teams have worked with different methodologies, from the very formal like Waterfall, RUP and CMMi to the more agile like Scrum or Extreme Programming. Based on this experience, we have optimized our project management methodology to provide the right mix of control, visibility and flexibility, while creating **high-quality software**.

By incorporating Estratec to your projects you gain the skills and vast experience of professionals specialized in multiple technologies and a variety of industries.

Capabilities

We are a multidisciplinary team, formed by **professionals** trained and specialized in different areas such as:

- Web & Mobile
- Internet of Things (IoT)
- Fintech & Blockchain
- Big Data, AI, Machine Learning
- Cloud Computing
- User eXperience (UX)

Cutting Edge Technologies

We are an interdisciplinary team of professionals trained and specialized in various technologies/areas, such as:

- JavaScript / Java / .Net
- AngularJS / Angular / React
- NodeJS / Mean / StrongLoop / Spring Framework / Hibernate / Embark
- MongoDB / Cassandra / Redis / Relational Databases
- Mobile: Native / Multiplatform development (Cordova + Ionic / React Native).
- Cloud computing: Google Cloud Platform and Amazon Web Services.
- Data Management & Analysis: Elasticsearch / Kibana.
- Responsive Design / HTML5 / CSS3 and UX.

Agile

We trust in Agile implementations, like **Scrum** and **Kanban**, which allow us to develop practices to get the best impact for collaboration between Developers, Clients and Users. Here are the most attractive key features we have found on Agile:

- **Quick start:** we help clients to identify the workload and necessary skills.
- **Easy team scaling:** we can quickly add more or reduce the number of workers.
- **Allows for change:** there is an opportunity to constantly refine and reprioritize the overall product backlog. New or changed backlog items can be planned for the next iteration, providing the opportunity to introduce changes within a few days.
- **Focuses on Business Value:** by allowing the client to determine the priority of features, the team understands what's most important to the client's business, and can deliver the features that provide the most business value.

Why Argentina?

7

Culture similarities

85% of the country's population is of European descent with strong immigration from Italy, Spain, Russia, Germany, Hungary, Poland and Israel.

The country has the best knowledge of English in the region.

6.000M of Export services, the most of Latin America.

Why Argentina?

Price & Great Quality Service

ComputerWeekly.com has named Argentina the top 1 outsourcing destination for building reliable and cost effective software development solutions.

Since the devaluation of our currency in 2002, the Argentinean software development market became very cost competitive. We compete internationally with countries such as India, Vietnam or Eastern Europe.

In addition, Argentina has the best talents in the region, a large pool of industry experts and bilingual engineers graduated from well known universities.

Close Time-Zone

We have geographical advantages compared to traditional Asian destinations. The fact that we are only a few hours behind Europe and even less hours ahead from the US allows us to interact naturally and frequently during the same working hours.
